ADDENDUM A – NOTES TO BE ADDED TO PLAT OF WOODLAND WATERS

NOTES RELATING TO PRIVATE ONSITE WASTEWATER TREATMENT SYSTEMS (POWTS):

1. This subdivision will be served by a community system of collection and disposal of sewage effluent by soil absorption.
2. The easements on the final plat reflect the layout of all components of the community system. A record as-built drawing will be produced after installation and all necessary adjustments to the easements shall be made at that time.
3. The design wastewater flow of the proposed dwellings may not exceed the stated maximum allocated for the mound POWTS unless the community system is first altered to accommodate the increased flow. The design per lot is four (4) bedrooms.
4. The required minimum horizontal setback from a building to a drip line POWTS treatment component is 10 feet. The minimum horizontal setback from a building to an exterior subsurface treatment tank is 5 feet.
5. Well and water supply line setbacks (i.e. 50 feet from a POWTS cell, 25 feet from a treatment tank and pressurized building sewer, and 8 feet to a non-pressurized building sewer).
6. All proposed absorption areas shall be protected (fencing is suggested) from cutting, filling or compaction.
